DETAILED ACTION

1. The Amendment and election, filed on 08/25/03, are acknowledged. Claims 10, 12-17, and 40-47 are cancelled without prejudice. Claims 1-9, 19-22, 24-39 and 48 are pending in the application.

Drawings

2. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

The drawings are objected to as either having too much text in them (Figures 2-4), or not having any captions, (Figures 29-92).

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-9, 19-22, 24-39 and 48 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The method recited in the pending claims is based on using "a newly-developed in-built software"; however no algorithm of such software is disclosed in the specification, which makes the method not enabled for any routineer in the art.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1743

6. Claims 1-9, 19-22, 24-39 and 48 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-3, 5-9, 19-22, 24-39 and 48 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: subjecting the extract to UV or VIS electromagnetic radiation before obtaining 3D chromatograms. Claims 19-22 also miss subjecting the material to a **chromatographic** separation.

Claims 20-22 do not specify details of the new in-built software, and therefore do not carry any additional information relative to the parent claim.

Claims 35-39 do not recite any additional method steps to the parent claim, and therefore it is not clear, what additional limitations to the method of claim 1 they recite.

Claim 48 provides for the use of fingerprints, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 48 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. *Pozzan et al. (ACS Meeting, 2002)* recite a method for "finding 3D pharmacophoric fingerprint descriptors"; *JP 02253156* teaches 3D chromatography with analyzing multiwave absorption spectra; *Hamada et al. (JP 404355366)* teach a method for detecting purity of component based on 3D chromatography; *Mito (US 6,002,986)* discloses a "fraction purity measuring apparatus for chromatogram peak" based on 3D-HPLC-UV chromatography"; *Young*

Art Unit: 1743

(US 6,466,923) discloses "a method and apparatus for biomathematical pattern recognition", including 3D chromatography Ishii et al. (US 2002/0062683) disclose 3D-HPLC-UV system and method for analyzing compounds.
